

CORPORATE OVERVIEW

THE NEXT GENERATION IN WHOLE OF SYSTEM HVAC&R OPTIMISATION

AERIS ENVIRONMENTAL LEADS THE WAY FOR MORE SUSTAINABLE BUILT ENVIRONMENTS

A patented, whole of system approach not only ensures HVAC&R systems perform better, last longer and cost less to run – it also helps building owners and managers create more sustainable built environments.

HOW IT WORKS

CLEANS

AerisGuard™ cleaners use patented anti-microbial multi-enzyme technology, which is non-toxic and non-acidic to breakdown and digest the biofilm and other contaminants. This is easily removed using a water pressure cleaner.

PROTECTS

AerisGuard™ Treatment is then applied to create a biostatic protective coating on the surface. This provides up to 12 months residual protection to control and prevent mould, fungi and odour causing bacteria. Ideal as part of an annual maintenance program.

OPTIMISES

Cleaner coils and surfaces result in improved air flow and more efficient heat exchange during the heating and cooling cycle.

Used in conjunction with SmartHUB™ technology, compressor performance is optimised to deliver lower running costs, cleaner healthier air and improved occupant comfort .

CONTROL

AerisView™ allows building managers to control assets for optimum performance and operation.

VISUALISATION

AerisView™ allows real time monitoring of a building's assets.

THE NEXT GENERATION IN WHOLE OF SYSTEM HVAC&R OPTIMISATION

AerisGuard™ patented multi-enzyme, antimicrobial technology safely cleans and removes contaminants as well as protecting it from recontamination for up to 12 months. This delivers better airflow, improved energy efficiency, improved indoor air quality, reduced running costs and extends asset life.

Aeris SmartHUB™ technology delivers improved performance, energy efficiency and indoor air quality by optimising the compressor, heat exchanger and system operation.

The AERISVIEW™ platform brings smart cities to life with a whole of system approach to building optimisation with a centralised asset management system. Designed with the building operator and manager in mind, the user-friendly interface delivers real time visibility and real time results.
